

Moderate Risk Deleading RRP Option - 4 Hr

This course was developed by the Massachusetts Division of Occupational Safety (DOS), in collaboration with the Massachusetts Childhood Lead Poisoning Prevention Program (CLPPP). This certificate allows the RRP trained professional to upgrade their abilities to Delead residential properties using Moderate Risk types of lead abatement. Upon completion of the training the DOS will issue the certificate holder an authorization number.

Renovators have a role to play in preventing lead poisoning. Dust from renovations, repairs, and surface preparation during painting activities creates potential lead hazards when lead-based paint is disturbed and lead-safe work practices are not used. Massachusetts has long recognized that many renovations have been used as illegal lead abatements. In an effort to protect the children of the Commonwealth and reduce the costs to a building owner the Moderate Risk Deleading RRP Option is being offered. Successful completion of the course includes taking and passing the test to become a Moderate Risk Deleader.

This half day class is from 8:00 am to 12:00 pm.

Objectives for the Course

- Understand the Regulations
- Review Set Up of Practices
- Review Prohibited Practices
- Cleaning and Checking Your Work
- Record Keeping
